To: Recipients in Unclassified Distribution Category: UC-48 (TID-4500)

The USAEC has just published the book, *A Tropical Rain Forest: A Study of Irradiation and Ecology at El Verde, Puerto Rico* (TID-24270). The book reports the scientific results of an intensive ecological study of the operation of several hectares of the normal montane rain forest compared with a zone that for three months received gamma-radiation stress from a 10,000-curie cesium source.

Because only a limited number of copies of the book were printed and because the book contains 1675 pages, DTI Extension is not making automatic standard distribution. If, after reviewing the Table of Contents printed here, you decide the book should be in your collection, please mark the appropriate space on the request card and return the card to us.
